## Southeast Kansas Soybean Highlight → 4745E3S

4745E3S is a standout 4.7 RM Enlist E3 variety built for tough SE Kansas soils. Its medium-tall height and strong standability help it perform in heavy, wet springs and tight clay soils. It delivers strong emergence, broad stress tolerance, and resistance to Stem Canker with excellent tolerance to Frogeye Leaf Spot and Sudden Death Syndrome.

With Enlist herbicide flexibility—Glyphosate, Glufosinate, 2,4-D, and Sulfonyleurea—4745E3S provides confident weed control and strong yield potential.

Our Wildlife Division had a booth at the Big Buck & Outdoor Show at the end of February, and it was a great experience. We enjoyed the opportunity to visit with hunters from across our region and share more about what we do. Our Wildlife Division continues to grow, and we couldn't be more excited about the opportunities ahead.

Now is the time to secure your plot seed and start planning for your next big buck. We offer proven blends from Real World Wildlife Products, and we can also create custom blends to meet your specific needs.

**GROWER APPRECIATION DINNER 2026**

We had our Grower Appreciation Dinner in February. This is one of our favorite events each year and we greatly appreciate the time and effort our growers put in to producing quality wheat and soybeans for our business.

## SPRING GRAZING COVER CROP BLEND

PSF GrazMaxx is a spring blend focused on speed and forage quality. Oats and peas provide fast, early growth and nutrition while the brassicas improve intake and extend grazing length. It's easy to plant, flexible on timing and a great fit for spring grazing situations! A typical 30-40 day grazing window helps bridge the early-season forage gap while improving soil structure and nutrient cycling.

"Plant it, graze it, move on!"

## FORAGE UPDATE

We are excited to announce several additions to our forages lineup this year. We have added four new Forage Sorghum varieties and three new Sorghum × Sudangrass varieties, expanding our options for high-quality forage production.

In addition, we have introduced six new Grain Sorghum varieties, including three new Double Team™ varieties. Double Team™ grain sorghums are tolerant to FirstAct™ herbicide (quizalofop), providing over-the-top grass control to help keep fields cleaner all the way through harvest.
