

SG 4825 BMR PPS

Sorghum x Sudangrass

Highlights

- Photoperiod sensitive BMR
- Wider harvest window and excellent regrowth after harvest
- Exceptional drought tolerance
- Will not head out until daylight hours are shorter than 12 hours, 20 minutes
- Excellent choice for hay, rotational grazing or silage
- Avoid planting on poorly drained soils and areas prone to Anthracnose and Fusarium

Plant Characteristics:

Days to First Harvest: 45 Days
 Plant Type: Sorghum x Sudangrass
 Photoperiod Sensitive
 Usage: Hay & Grazing
 Cutting Height: 36" to 40"
 Seed Color: Not Available
 Plant Height: 7' to 8'
 Nutritional Value: Very Good
 Drought Tolerance: Very Good
 Lodging Resistance: Excellent
 Regrowth: Excellent
 Sugar Can Aphid Tolerance: Poor

Planting Information:

Approximate Sees/lb.: 13,000 to 15,000
 Lbs./Acre Dryland Row: 6 to 9
 Lbs./Acre Dryland Drilled: 15 to 22.
 Lbs./Acre Irrigated Row: 8 to 12
 Lbs./Acre Irrigated Drilled: 20 to 25

Note: This is not a Brachytic Dwarf, but does have dwarf genes which keeps its height in check.
