New Phillips Seed Corn Hybrids Delivering Strong Early Results.....

Our new **PS1526 VPR/SSR** is delivering outstanding performance across Kansas in both dryland and irrigated environments. To date, it is averaging 106.5% of plot average, with particularly strong performance in dryland trials.

Our new **PS1147 TRE** is also performing well, currently averaging 103.2% of plot average. While it has shown success across a range of environments, its strongest results have come under irrigated conditions.

We've also expanded our lineup with the addition of **PS0326 PCE** and **PS1227 PCE**. The **PS0326 PCE** is a rugged, short-season hybrid (103 RM) that has proven to be a dependable performer, particularly in dryland environments where consistency is critical.

The **PS1227 PCE** (112 RM) combines excellent yield potential with strong agronomics and has demonstrated the ability to compete with, and often outperform, longer-season hybrids. In trials to date, **PS1227 PCE** is averaging 105.4% of plot average and appears to excel in irrigated environments.

Phillips Seed Farms is committed to bringing growers high-performing genetics backed by extensive testing across diverse environments. We look forward to sharing additional harvest results as they become available.

Fall Cover Crops and Lawn Care Season Is Here

As temperatures begin to cool, it's time to start thinking about fall cover crops, grazing options, and lawn renovation projects.

For producers looking for a high-quality cover crop and grazing option, GrazMaxx continues to be a popular choice. This proven blend combines oats, forage peas, turnips, and radishes to provide excellent fall grazing potential while also delivering significant soil health benefits. GrazMaxx offers a diverse mix of species that work together to improve soil structure, nutrient cycling, and overall productivity.

We are also seeing strong interest in triticale and cereal rye this fall. Both crops offer excellent versatility as cover crops and forage sources, providing producers with additional options to fit their operation's needs.

Fall is also the ideal time to renovate and reseed lawns. Our Playground Fescue blend is specifically designed for high-traffic areas and combines two premium fescue varieties with a small amount of bluegrass. The result is a durable, dark green turf that delivers both outstanding appearance and long-term performance.

Whether you're improving grazing acres, enhancing soil health, or establishing a thicker, healthier lawn, Phillips Seed Farms has products to help you make the most of the fall season.

Pre-Pay Reminder

Deadline: October 15th to secure a 14% discount.

Lock in discounted pricing on corn, soybeans, and milo with early pre-pay. Our team is ready to help you plan, order and save!

OPEN HOUSE 2026 was a success! We had good food, wonderful speakers and beautiful weather. Thank you to those who came and we look forward to this event next year!
